Concentric Mounting Adaptor

Mounting adaptor for the TinyMike (ATM216)

The mounting adaptor (ATHPD) serves to adapt the diameter of the TinyMike (ATM216) to camera's microphone bracket.

One to two layers of the supplied foam rubber build up the diameter.

Start and end the foam rubber near the slit. For most Sony cameras one layer, for most Panasonic two layers are sufficient.

When done, insert the cable through the barrel adaptor and plug it into the microphone. Then insert the TinyMike (ATM216) into the adaptor (ATHPD).

Technical Details

Material: POM

Color: black

Length: 26 mm

Incl. foam rubber

experience quality.
