

THE TINY MIKE

AMBIENT TinyMike ATM 216

The Tiny Mike has been specially developed for use with consumer video cameras when used in a professional shooting situation. Often the camera is very near the action but the built in camera mike delivers hardly usable direct sound as quality is low due to camera noise and low directional characteristic. Up to now there have not been any small electret mikes with a highly directional characteristic for use on such cameras. The available professional microphones often need phantom powering and are twice as long as the camera itself making mike and camera assembly unwieldy.

The Tiny Mike fills this gap. It is a miniature „shotgun“ mike complete with soft mike support, windshield and a shoe to fit on the camera. It can also be powered by standard „plug in power“ available on consumer cameras, Thus no power supply is necessary. The mike is fitted with a socket as in professional units. It is thus possible to use different cables and adapt the mike for 48 Volt Phantom power using an Ambient Eumel.

Features:

- Electret Microphone can be powered by „ Plug in power“ available on almost all DV Camcorders
- Good general frequency response with highly directional characteristic in mid and high frequency range
- Ready to use accessories
- Wind shield
- Mike support and soft suspension
- Standard Photoshoe fitting
